

Concord University Wireless Setup for Windows 7

Concord's campus wireless services using the ssid name 'cusecure' are encrypted using wpa2 and require authentication to use, this requires a small one-time setup on the user's part to connect successfully. These instructions should be sufficient to help most Windows Seven users set up their computers to use the campus wireless services.

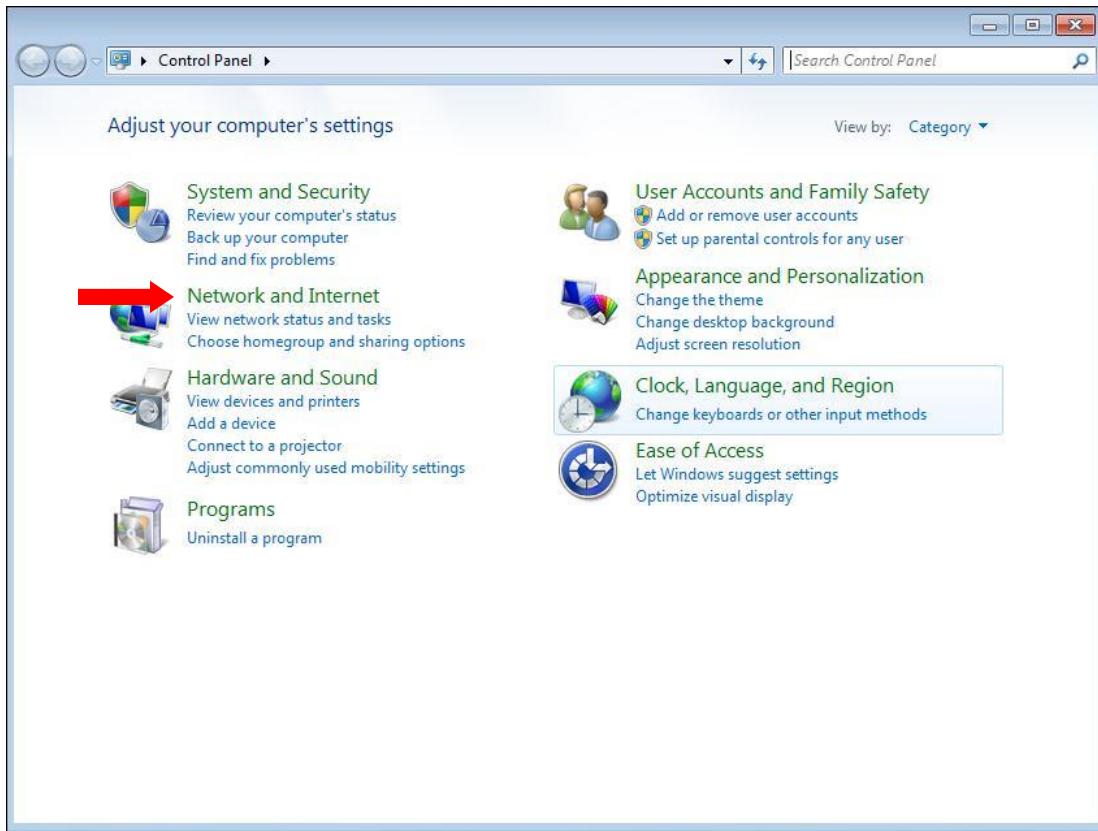

Getting Setup

These instructions assume you have a computer running Windows Seven and an installed wireless network interface card (NIC) which supports wpa2 encryption (most do).

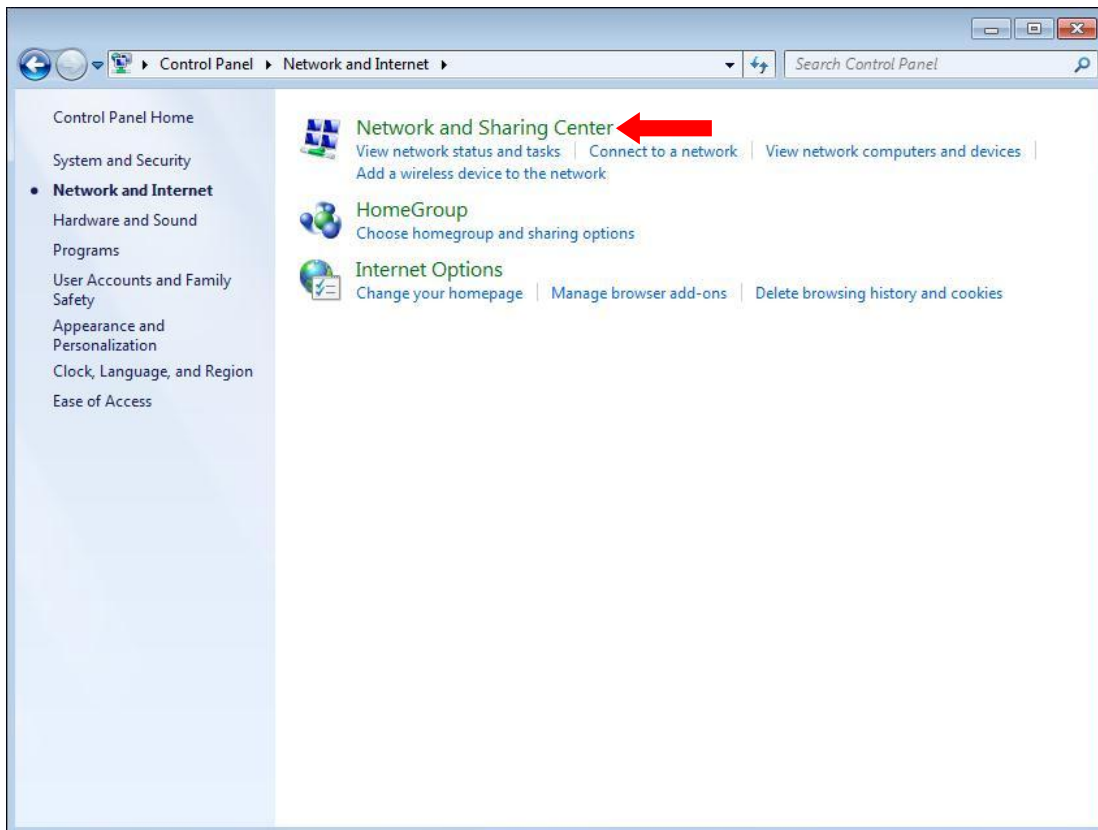

1. Click START and select CONTROL PANEL.

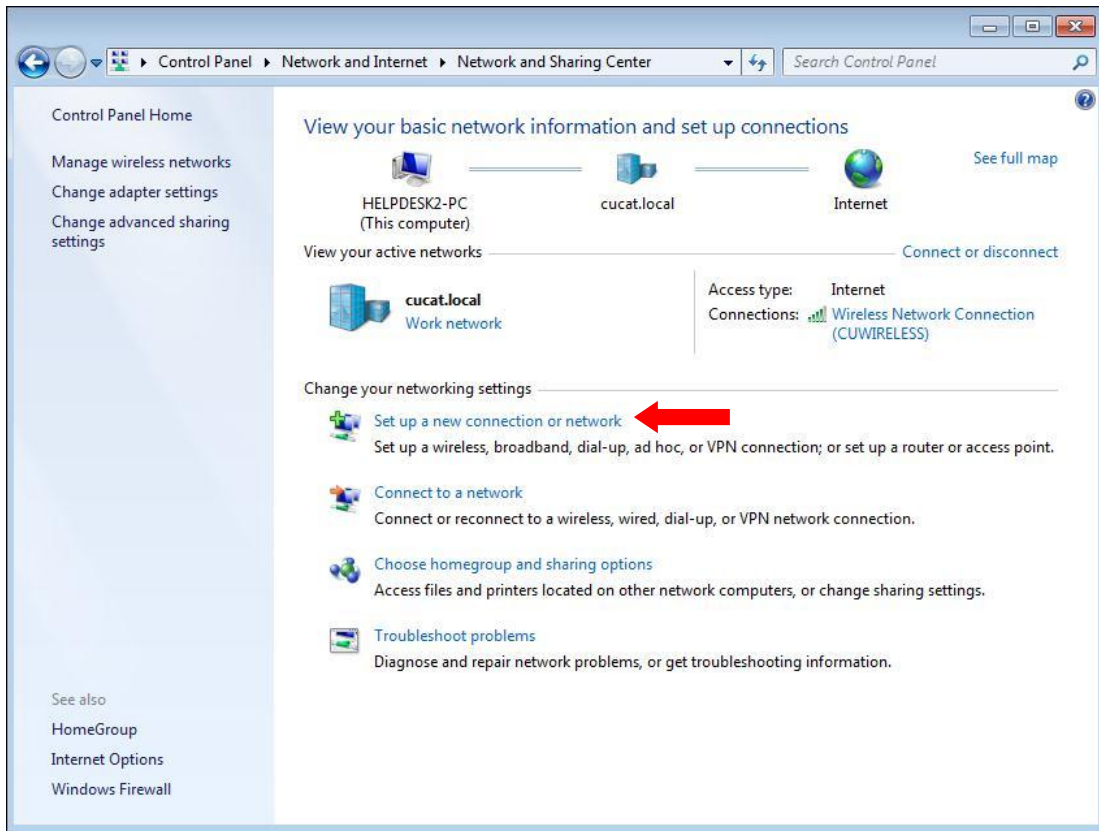

2. Click NETWORK AND INTERNET.

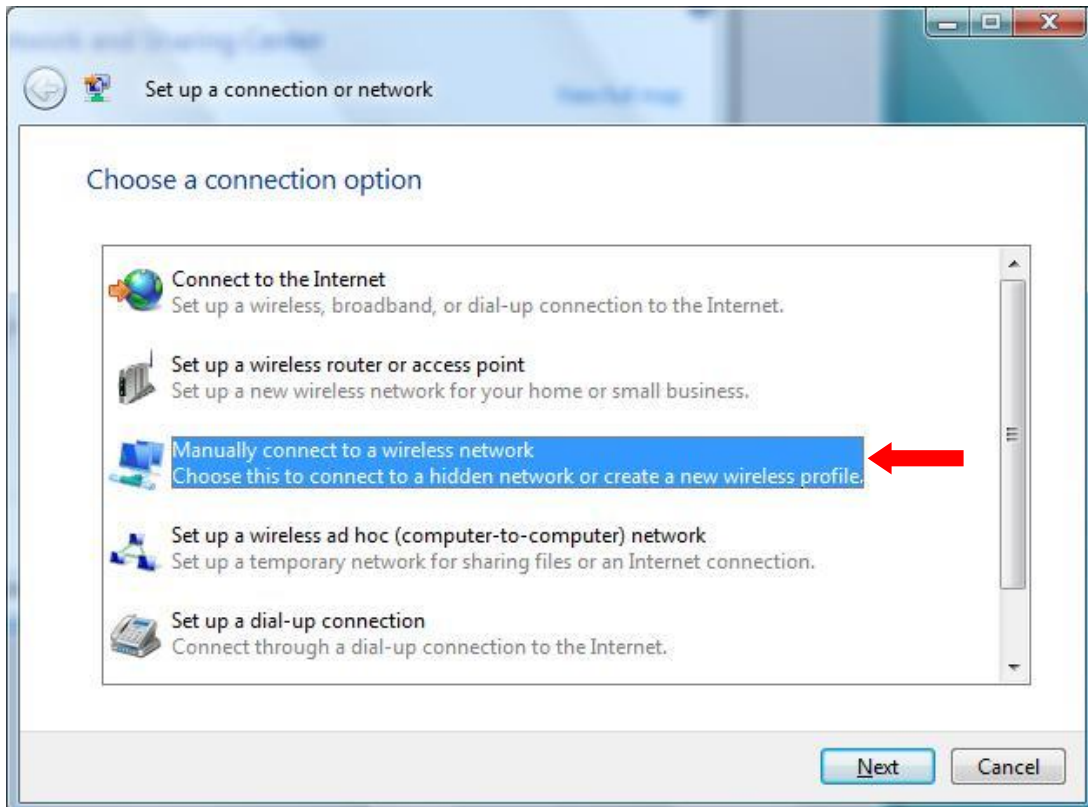

3. Click NETWORK AND SHARING CENTER

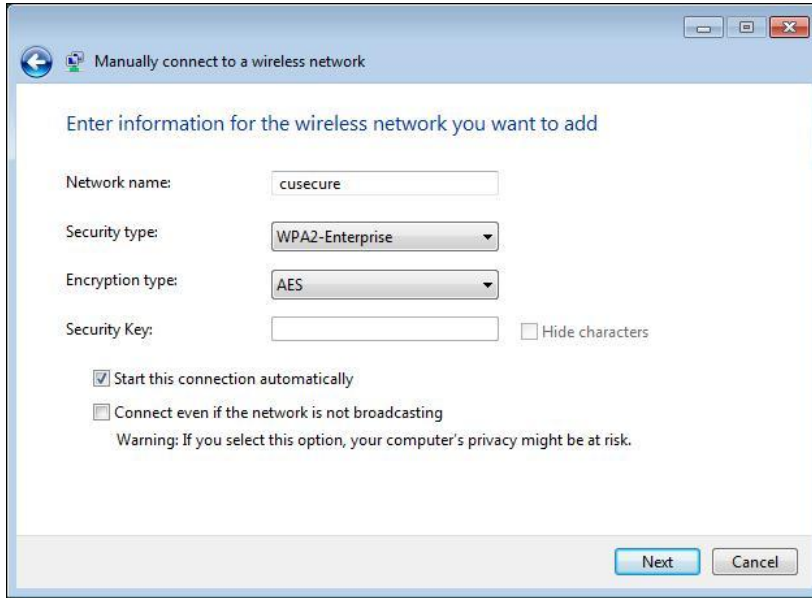

4. Click SET UP A NEW CONNECTION OR NETWORK

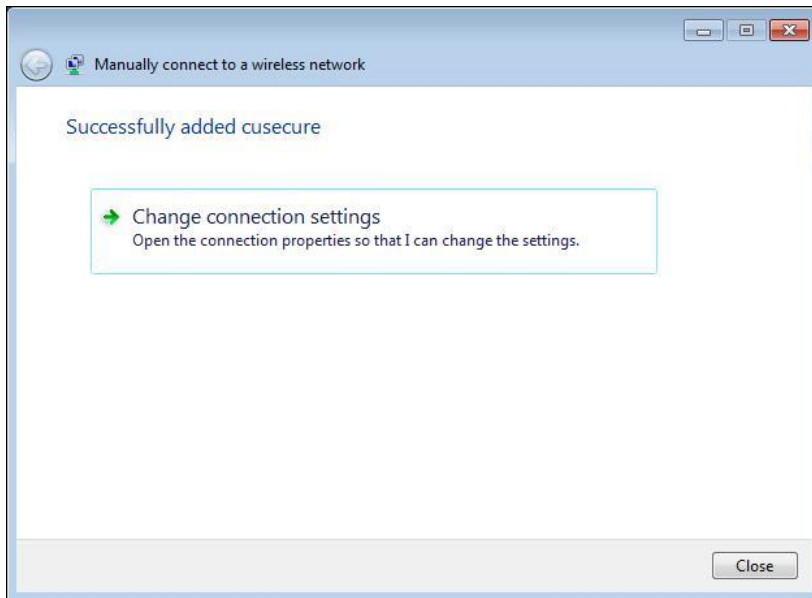

5. Click MANUALLY CONNECT TO A WIRELESS NETWORK then next.

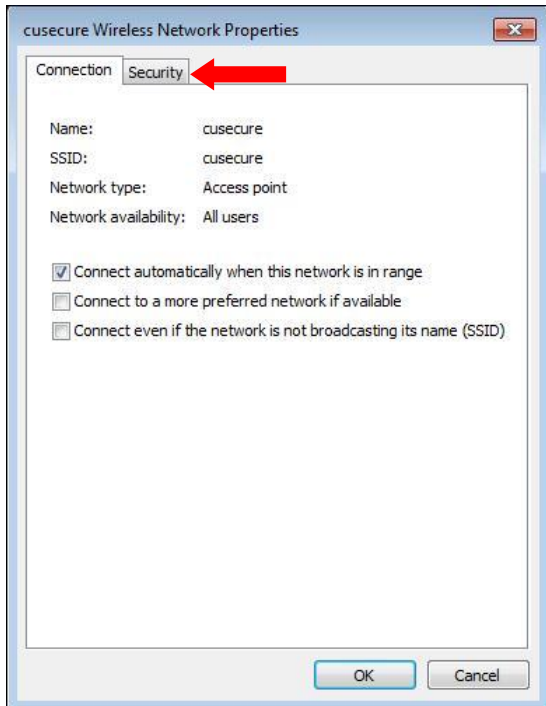

- Type cusecure in the NETWORK NAME box, select WPA2-ENTERPRISE for the SECURITY TYPE, and choose AES for the ENCRYPTION TYPE then next.

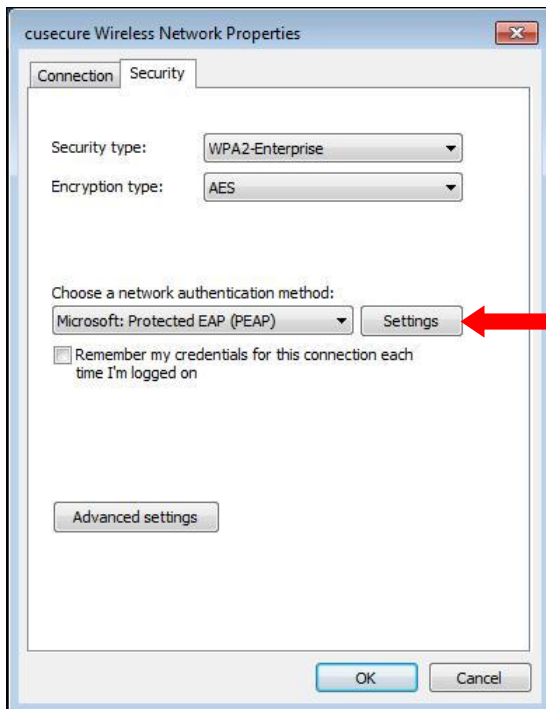

- You should see this window, click CHANGE CONNECTION SETTINGS.

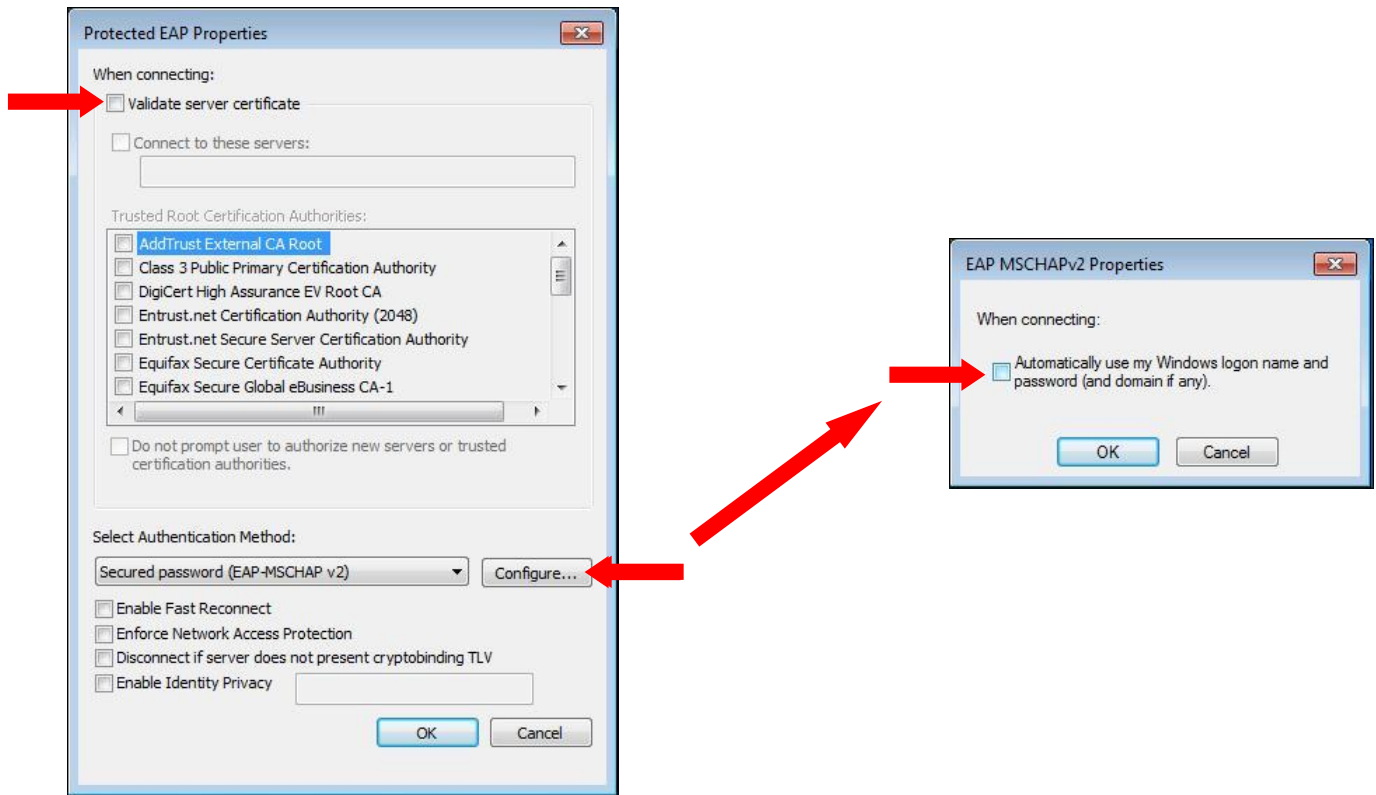

8. Uncheck boxes as shown then click the SECURITY tab

9. Uncheck REMEMBER MY CREDENTIALS... if you don't want your logon info to be remembered (recommended), make sure WPA2-Enterprise and AES is selected as shown and that PROTECTED EAP (PEAP) is selected under AUTHENTICATION METHOD as shown, then click SETTINGS:

10. Uncheck VALIDATE SERVER CERTIFICATE and other boxes as shown, then click CONFIGURE
Uncheck AUTOMATICALLY USE MY WINDOWS LOGON NAME...
click OK on all windows back to the desktop.

Connecting

1. Click the SIGNAL BARS ICON on your task bar to show the available wireless network names. Choose 'cusecure' from the list of names then CONNECT.

2. Enter your Concord UserID and password (without the @concord.edu or @mycu.concord.edu) to logon then OK (if you can't connect, double check your settings using this tutorial and try again)

3. All Done! There is no need to do this setup again, just connect when needed.

Need Help?

- Call our help desk at 304-716-0054 or x5291 (Mon-Fri 8am-4pm) from in front of your computer.
