

CONCORD COLLEGE
Athens, West Virginia
June 1, 1970

CITATION

DANIEL HALE
Doctor of Science

DANIEL HALE, Doctor of Medicine, you have on occasion rightly referred to yourself as a "practicing physician and lay conservationist." Born nearby in Princeton, the descendant of a Southern Appalachian pioneer family, former paper boy, top graduate of your class at Princeton High School, you worked your way through college at the University of Illinois, earned your degree in medicine at Northwestern, and, except for an absence of three and one-half years during World War II as a medical officer in the South Pacific, have been practicing medicine ever since in your hometown. For over two decades, long before concern for our environment became fashionable, you have been active in healing the wounds of nature while you healed the wounds of man. In your own words, "All resources, both human and natural, are inter-related and interact upon each other to the extent that not a single one can be successfully isolated or dealt with alone." Because of your vision of a cleaner, safer and healthier environment, because of your total dedication, courage, skill and energy to make your dream a reality, and because of your concern for future generations, Concord College today joins others in giving you a well-deserved honor. To you, a true scientist, who practices both medicine and conservation with skill and devotion, we hereby grant and confer upon you our degree of Doctor of Science.

In testimony of this degree I hand you this diploma and cause you to be invested with this hood.

Given under the Seal of Concord College and conferred from the academic halls in Athens, West Virginia, on this first day of June, in the year of our Lord one thousand nine hundred and seventy, and of the College the ninety-ninth.

Joseph Franklin Marsh, Jr.
President
