## What is Naloxone?

**Naloxone** is a medicine that rapidly reverses an opioid overdose. It attaches to opioid receptors and reverses and blocks the effects of other opioids. **Naloxone** is a safe medicine. It only reverses overdose in people with opioids in their systems.

### You can save lives with Naloxone.

Nearly **27,000** lives have been saved as a result of Naloxone kits given to friends and family to reverse opioid overdoses, found a new study published in the Centers for Disease Control and Prevention's June 19th Morbidity and Mortality Weekly Report

### What are the effects of Naloxone?

These include body aches, a fever, sweating, runny nose, sneezing, goose bumps, yawning, weakness, shivering or trembling, nervousness, restlessness or irritability, diarrhea, nausea or vomiting, stomach cramps, fast heartbeat, and increased blood pressure. A small side effect next to saving a life.

You can visit : <https://harmreduction.org/issues/overdose-prevention/overview/overdose-basics/understanding-naloxone/>

To learn more about Naloxone

Naloxone can reverse an opioid over dose and save a life.

Proper Naloxone training and access to Naloxone will save lives.

Once you complete the training a Naloxone kit will be sent to you by mail or can be picked up at the John David Smith house social work education building.

**Hope to see you at the next training.**

### 5 Essential Steps for Opioid Overdose:

- Call for Help (Dial 911)
- Check for Signs of Opioid Overdose

- Support the Person's Breathing
- Administer Naloxone
- Monitor the Person's Response
